Density Estimation Packages

In this notebook, we compare the density estimation results of our `kef` approach with other methods available in CRAN. We use the list of packages reviewed by Deng & Wickham (2011) for density estimation in R, including: `ASH`, `ftnonpar`, `GenKern`, `gss`, `kerdiest`, `KernSmooth`, `ks`, `locfit`, `logspline`, `MASS`, `np`, `pendensity`, `plugdensity`, `stat`, `sm`, `bayesm`, `delt`, `feature`, `fdrtool`, `hdrcde`, `ICE`, `latticeDensity`, `logcondens`, `MKLE`, and `pencopula`.

Including Plots

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.
